

## Anvil Stand

By Dan Cassidy, Journeyman Smith

I made an anvil stand for my 275 pound anvil from instructions and plans provided to me by Steve and David Kane at Kane and Son's [Blacksmith's Depot](#) in Candler, NC. The stand is constructed of scrap floor trusses, two oak boards, 4 threaded rods, and 8 washers and nuts for the rods.

I have attached a diagram of the design and a photo of the stand with the 275 pound anvil that been held securely in place for many years in my shop.
