

Tire Power Hammer Plans

By Clay Spencer

Ray Clontz of Charlotte, North Carolina invented the Tire Power Hammer pictured below which uses the emergency spare tire and rim, hub and rear axle from a front drive car. It uses a spring and arms linkage similar to a Little Giant power hammer. Call it the Ray Clontz Tire Power Hammer.

As of October 2008, over 325 hammers have been built using this design without problems. Clay Spencer is offering the plans for the building of the Tire Power Hammer in a 30 page booklet which has detailed instructions, parts lists, and diagrams. Contact Clay Spencer at cell 256-558-3658, or write to 73 Penniston Pvt. Drive, Somerville, AL 35670. The plans cost is \$30, postage paid.
